

COMPLIANCE

**HUGO BOSS
ENVIRONMENTAL &
FOREST CONSERVATION
POLICY**

AT A GLANCE

This overview shall provide all HUGO BOSS employees and third parties with the core contents and regulations of the HUGO BOSS Environmental & Forest Conservation Policy:

- I. HUGO BOSS is dedicated to protecting the environment and contribute to a sustainable future by embedding sustainability into its operations.
- II. The principles defined in this Policy form the foundation for reducing the Company's impact on climate change, conserving natural resources, reducing environmental pollution (e.g., water and soil pollution), and contributing to the preservation of forests and biodiversity.
- III. Sustainability is integrated into the HUGO BOSS operations, including product design¹, manufacturing, logistics, and packaging, with adherence to internationally recognized standards such as ISO 14001 and ISO 50001.
- IV. The Company implements a due diligence system, where the EU Deforestation Regulation (EUDR) is applicable, to eliminate deforestation risks in its supply chain and safeguard that all forest-based products are responsibly sourced in full compliance with EUDR requirements.
- V. Employees, suppliers, and business partners are required to follow strict environmental standards, supported by training, monitoring, and transparent reporting of environmental performance.
- VI. A solid governance framework ensures the effective implementation, monitoring, and continuous improvement of the Policy, with clear accountability and channels for reporting violations or suggestions.

¹ The term "product" refers exclusively to HUGO BOSS textile and leather products, encompassing both finished goods and raw materials (incl. all components), while excluding all non-product materials.

1 COMMITMENT TO THE PROTECTION OF ENVIRONMENT & FOREST CONSERVATION

At HUGO BOSS, we are committed to protecting our planet and ensuring a livable future for generations to come. We therefore attribute high importance to sustainability, which is anchored in our Group strategy. Our sustainability strategy aims to make a vital contribution to our environmental impact. It reflects our commitment to producing products with social and environmental responsibility while maintaining the high quality of our collections.

The principles defined in our Environmental & Forest Conservation Policy form the foundation for minimizing our impact on climate change, conserving natural resources, reducing environmental pollution (e.g., water and soil pollution), and contributing to the preservation of forests and biodiversity. Particular attention is paid to our global supply chain, ensuring that sustainability is embedded in every aspect of our operations.²

The success of our Environmental & Forest Conservation Policy depends on the active involvement of all employees. We are committed to motivating our workforce to share knowledge, promote environmental awareness, and adopt conscious behaviors. Training and awareness programs empower employees to contribute to our sustainability targets, both within the Company and in collaboration with our partners.

The Managing Board of HUGO BOSS AG is committed to group-wide environmental and forest conservation measures and compliance with all applicable national and international regulations. Endorsed by the Managing Board, this Policy reflects our dedication to fostering a culture of sustainability. By driving continuous improvement of processes, we aim to lead by example in the fashion industry.

2 SCOPE

This Policy defines binding principles and requirements to ensure that environmental considerations are systematically integrated into the Company's operations and supply chain. It is applicable across all subsidiaries, business units, sites, and partnerships, and forms a core component of the Group's sustainability strategy.

Compliance with this Policy is, hence, mandatory for all employees, suppliers, and business partners. Should this Policy conflict with specific national legislation, individual provisions of the Policy may be amended. In such cases, however, the amended provisions may not deviate in their essential content and purpose from the present Group-wide provisions. Such exceptions must be justified and always be agreed with the Central Compliance Department.

² Acting environmentally responsible means to us to continuously working on improvements across the stages of our value chain including the different phases of the life cycle of our products. To maximize our efforts, HUGO BOSS collaborates with various organizations, such as the United Nations Framework Convention on Climate Change (UNFCCC), the Zero Discharge of Hazardous Chemicals (ZDHC) program, the International Cotton Advisory Committee (ICAC) and the International Wool Textile Organisation (IWTO), Cascale and the United Nations Industrial Development Organization (UNIDO). Many of our sites apply globally recognized standards, including ISO 14001, ISO 14041, and ISO 50001, to strengthen environmental protection and ensure efficient and effective practices.

3 ENVIRONMENTAL MANAGEMENT

3.1 HUGO BOSS SITES

HUGO BOSS is committed to embedding sustainability into the planning, construction, and operation of all its sites.

As part of our commitment to limiting **climate change**, recognized **sustainability certifications** shall be pursued wherever feasible, for the construction of own non-retail locations at the headquarters and around the world, while selected newly opened retail stores shall be certified under certification systems such as "LEED" or "BREEAM". **Energy reduction measures** should be systematically assessed and ideally be implemented in all renovation and reconstruction projects.

HUGO BOSS will continuously increase the share of **renewable energy** in its electricity consumption and, wherever feasible, generate renewable power on-site.

As part of our commitment to reducing **environmental pollution** (e.g., water and soil pollution) and conserving **natural resources**, all facilities, including production sites, shall operate in accordance with "ISO 14001" standard and implement effective measures to prevent **environmental pollution**. **Water, raw material, and consumable use** shall be reduced through process optimization and employee training. **Waste** generation shall be minimized through avoidance, recycling, and reuse, with all separation and disposal practices conducted in compliance with applicable legal requirements.

GOVERNANCE

HUGO BOSS will implement and continuously improve its environmental performance in accordance with internationally recognized standards, specifically "DIN EN ISO 14001" and "DIN EN ISO 50001". Certifications under these standards are obtained and maintained for many Group sites. A centralized environmental data management system, implemented across the Group, shall ensure consistent, efficient, and effective protection of natural resources.

3.2 DESIGN AND PRODUCT³ DEVELOPMENT

Preferred materials that are less harmful for climate change, water consumption and pollution and biodiversity impact shall be a decision criterion in product design while maintaining high quality standards.

As part of our commitment to limiting **climate change**, reducing **environmental pollution** (e.g., water and soil pollution) and conserving **natural resources**, HUGO BOSS set internal guidelines and specifications for raw materials and manufacturing processes that apply from the earliest stages of product design and development.

GOVERNANCE

Our document on **Material Strategy** summarizes our product sustainability targets based on recognized standards and certifications for our preferred materials. Beyond, it includes the criteria to **design a product for circularity**. Employees involved in product design and development shall receive mandatory training, including training in product design for circularity.

³ The term "product" refers exclusively to HUGO BOSS textile and leather products, encompassing both finished goods and raw materials (incl. all components), while excluding all non-product materials.

3.3 MANUFACTURING OF OUR PRODUCTS⁴

Suppliers and other business partners of our products are obliged to minimize environmental impacts in their operations and should also work to reduce them in their supply chain. Compliance with this Policy is a mandatory condition for business relationships with HUGO BOSS. All suppliers must comply with all applicable local, national, and international environmental laws and must establish internal systems to ensure continuous environmental controls and the reduction of impact.

As part of our commitment to limiting **climate change**, suppliers shall identify measures to reduce energy consumption, hence greenhouse gas emissions, such as phasing out coal and other fossil fuels facilitating the transition to renewable energy sources wherever possible in each country.

Besides, as part of our commitment to preserving **natural resources** (e.g., water), they shall optimize water consumption, with particular focus on water-intensive processes.

In addition, as part of our commitment to reducing **environmental pollution**, chemical use and environmental management shall be governed by robust systems to ensure compliance with national laws and the ZDHC Manufacturing Restricted Substances List (MRSL). Suppliers are required to regularly verify their chemical inventories against the MRSL and to regularly monitor and test wastewater to meet statutory requirements, mitigate water pollution and ensure lawful disposal. Additionally, adherence to the HUGO BOSS Restricted Substances List (RSL) is mandatory, with compliance verified through testing conducted by accredited external laboratories.

GOVERNANCE

Effective environmental management systems shall be maintained by suppliers of our products, ensuring clear responsibilities, regular training, monitoring, and transparent reporting of environmental performance. In line with our **Commitment for Decarbonization in the Supply Chain**, all direct HUGO BOSS suppliers (or partners) shall regularly assess their environmental performance through an annual self-assessment. This data is monitored and evaluated using a well-recognized sustainability data and analytics platform and is independently verified by accredited third-party certifiers to ensure accuracy and reliability. Based on the assessment results, HUGO BOSS provides tailored training programs to address specific needs and challenges while employing a risk-based approach to ensure the effective implementation of corrective action plans.

The insights gained from these assessments support HUGO BOSS in developing tailored climate change mitigation measures for suppliers with significant potential for improvement. These measures align with the Company's broader aim to drive supply chain decarbonization by enhancing overall environmental performance.

3.4 LOGISTICS

HUGO BOSS shall ensure that all logistics processes are conducted in a sustainable and resource-efficient manner. Logistics operations should be designed to optimize resource utilization, reduce environmental impacts, and contribute to the Group's long-term sustainability targets. Service providers engaged by HUGO BOSS shall demonstrate a clear commitment to sustainability, continuous improvement, and relevant environmental certifications. Preference shall be given to providers able to evidence robust performance.

⁴ The term "product" refers exclusively to HUGO BOSS textile and leather products, encompassing both finished goods and raw materials (incl. all components), while excluding all non-product materials.

As part of our commitment to limiting **climate change**, HUGO BOSS shall apply recognized best practices in logistics management like optimized routes and the usage of low-impact shipping methods and implement continuous improvement measures to reduce environmental impacts.

GOVERNANCE

Transport routes and logistics structures are assessed utilizing specialized tools, while vehicle efficiency undergoes systematic evaluation to ensure the selection of the most appropriate means of transport, with the overarching goal of minimizing greenhouse gases. These efforts are tracked and transparently reported to foster accountability and support ongoing improvement.

3.5 PACKAGING MATERIALS AT HUGO BOSS

To further reduce environmental impacts, including limiting **climate change**, conserving **natural resources** and preserving **forests and biodiversity**, HUGO BOSS is committed to minimizing reliance on virgin wood as a raw material. Wherever feasible, virgin wood as raw material must be replaced with recycled content or alternative, preferred materials. In cases where virgin material remains necessary, all forest-based products must, wherever feasible, be sourced from responsibly managed forests certified by the Forest Stewardship Council (FSC) or equivalent credible standards, ensuring a balance between society's demand for forest products and the long-term preservation of forest ecosystems.

All functions involved in purchasing or in defining purchasing standards and specifications for paper and paper-based packaging are required to ensure that suppliers can demonstrate and prove that **no materials originate from Ancient or Endangered Forests**, areas of deforestation, regions involving the invasion of indigenous lands or protected areas, or from the use of forced or child labor.

Packaging materials at HUGO BOSS shall also be subject to sustainability requirements and principles. Packaging shall be designed for **reuse and recovery**, with a focus on optimizing weight, dimensions, and reusability to enhance environmental efficiency in logistics. The use of recycled and certified materials shall continuously be expanded, and all paper-/ wood-based packaging procured for HUGO BOSS must be FSC®-certified (FSC® N002527). Wherever possible, cardboard is reused, and only foils with high recycled content are utilized to protect hanging goods.

GOVERNANCE

The HUGO BOSS internal and external **Sustainable Packaging Guidelines**, applicable to both our supply chain partners and employees, outline the sustainability criteria for paper and other packaging materials as well as the vision and development principles for more sustainable packaging.

4 FOREST CONSERVATION

HUGO BOSS is dedicated to combating deforestation and advancing environmental preservation as part of its broader commitment to sustainability and responsible business practices. We recognize the critical role that forests play in maintaining biodiversity, regulating the climate, and supporting the protection of local communities, and we are committed to protecting these vital ecosystems.

Where **the EU Deforestation Regulation (EUDR)** is applicable, HUGO BOSS implements a robust due diligence system to ensure, in close collaboration with its supply chain partners, that the risk of deforestation - as defined by the EUDR - is eliminated or minimized to a negligible level in the countries

of production. At HUGO BOSS, the commodities leather, paper-based products, and timber fall currently within the scope of the EUDR requirements.

Suppliers covered by the EUDR are required to comply with the requirements set out therein. This includes fulfilling all due diligence obligations and ensuring that all relevant products supplied to HUGO BOSS are deforestation-free and produced in accordance with the applicable legislation of the country of production, among others. Suppliers must demonstrate and prove compliance by providing all legally required documents and data to HUGO BOSS.

GOVERNANCE

The HUGO BOSS EUDR due diligence system is built upon a comprehensive risk analysis framework, the systematic collection and verification of relevant data and documentation, and close collaboration with suppliers to ensure compliance with stringent national laws. These laws cover key areas such as human rights, labor rights, land use rights, environmental protection, and forest regulations.

Additionally, the system incorporates a risk management framework that mandates the implementation of targeted mitigation measures where risks are identified. To uphold the effectiveness and integrity of these processes, HUGO BOSS has established a robust governance structure to oversee enforcement, conduct regular reviews, and implement necessary adjustments to ensure continuous improvement and compliance.

5 COLLABORATION WITH STAKEHOLDERS

HUGO BOSS recognizes that the textile value chain is characterized by a high degree of complexity, which may result in evolving environmental requirements and challenges. We are committed to proactively addressing these changes through a permanent and structured dialogue with internal and external stakeholders, and by adjusting our environmental management activities as necessary.

HUGO BOSS shall regularly inform all relevant stakeholder groups, including employees, suppliers, and other external partners, about the Group's sustainability strategy, initiatives, and performance achievements. This shall be accomplished through the systematic collection of environmental data, evaluation of this data against defined targets, optimization of relevant processes, and transparent reporting of outcomes. Reporting shall serve both to demonstrate progress and to explain any deviations from targets.

HUGO BOSS shall actively engage with internal and external experts to incorporate their insights, assessments, and recommendations into the continuous improvement of environmental performance. Employees shall be provided with a continuous flow of information regarding environmental matters and shall participate in ongoing training programs designed to ensure awareness and competence. These measures are a key responsibility of management and an essential enabler for the continuous reduction of environmental impacts throughout the entire value chain.

6 GOVERNANCE

HUGO BOSS is dedicated to ensuring the effective implementation, monitoring, and enforcement of the requirements outlined in this Policy across all business units, sites, and supply chain and business partners. The governance measures supporting this commitment are comprehensively detailed within the subchapters of this Policy.

To uphold transparency and accountability, HUGO BOSS maintains clear documentation of all monitoring activities, audits, reports, and corrective actions. This ensures compliance with regulatory, certification, and contractual obligations while supporting both internal and external assurance processes.

In cases of repeated, significant, or unresolved non-compliance, escalation procedures will be initiated. These may include notifying the Group Compliance Officer and senior management, suspending operations or orders, or terminating business relationships. Internally, failure to adhere to the Policy will result in disciplinary measures proportionate to the severity and recurrence of the non-compliance.

7 CHANNELS FOR COMPLAINTS

Violations of this Policy as well as any misconduct can be submitted (anonymously) at any time to the [HUGO BOSS Speak Up Channel](#) or the [HUGO BOSS Ombudsperson](#).

8 UPDATING, CONTROLS AND REVISION

The monitoring of compliance and the evaluation of procedural effectiveness are conducted on a regular basis, at least annually or as required, by the Central Compliance Department and designated sustainability colleagues through a combination of internal audits, inspections, and environmental performance assessments. The Central Compliance Department reserves the right to carry out checks on fulfilment of the requirements set out in this Policy at any time and without prior notice.

This Policy may be amended at any time and will be subject to regular review by the Central Compliance Department at least once a year to ensure it is up to date. Continuous improvement shall be ensured through structured feedback loops, engagement with external experts, and regular benchmarking against best practices in environmental management, sustainable logistics, supply chain responsibility, and product development. The most recent version of the Policy will always be available on HUGO BOSS Group website and on the HUGO BOSS intranet.

9 VALIDITY AND ENTRY INTO FORCE

This Policy replaces the previous Environmental Policy. The Policy takes effect on 17.12.2025 and applies without restrictions within the scope of the Policy.
